

DIMIX further development of DTF ink

Information new DTF inks and associated settings.

In order to be able to offer you the best in the field of DTF printing, Dimix is continuously developing.

We have developed a new series of inks, recognizable by the square bottles, the previous series was packed in round bottles. This 2^e Generation DTF inks offer improvements in color, coverage and energy consumption in particular.

The ingredients of the ink have remained the same.

The new inks offer:

- Bright colors
- Lower energy consumption
- More pigment, therefore lower ink consumption
- Adjust white layer down by at least 10%
- Transfers become more elastic
- White ink blends even better and provides more coverage
- Inks from the round bottles and square bottles can be mixed together
- When switching to the new inks, you do not need to flush the system
- Discharge temperature (settings) remain unchanged
- Printer settings remain the same
- Print speeds and print mode have remained the same
- Price has remained the same.
- Settings for the Powder-Fix and ICC profile of Hot- and Coldpeel are the same.

Institutions:

- Temperature of the Powder-Fix may be set at 105/105 degrees (previously 115/125)
- White ink percentage may be reduced by at least 10%
- You will receive a new profile for Maintop RIP software.
