

AutoGraph White on Black

AutoGraph is a 40% transparency perforated window film. This exclusive film features patented air release channels in its adhesive, enabling easy bubble-free installation if overlaminated.

These channels cross every perforation so when overlaminated and applied to glass, any trapped air can be easily expelled through the network of channels resulting in a smooth and bubble free application.

AutoGraph also includes a number of additional product benefits making it the ideal choice for vehicle graphics and other overlaminated applications. The thinner polymeric facefilm allows for greater conformability to curved vehicle windows. The specially formulated adhesive allows for reliable cold weather application down to 0°C (32°F). Offers an enhanced adhesion level, while still allowing clean removability.

Contra Vision® optically clear overlaminate CL50CY is a 50micron cast PVC recommended for use with **AutoGraph** providing excellent optical clarity, protection, and is suitable for all overlaminated applications including curved vehicle windows.

“ Patented technology provides easier, bubble-free application and minimises see-through distortion from overuse of a squeegee. ”

AutoGraph features air release channels within the adhesive.

Product Specification

Product name	AutoGraph Black on White
Product code	WBPEG40
Transparency	40% (60/40)
Facefilm	150 micron Polymeric PVC
Adhesive	Transparent solvent polyacrylate with air egress channels
Roll width	1370mm
Roll length	10m / 50m
Primary uses	Vehicle graphics and other overlaminated applications
